NORRES portfolio on show to an international audience at FAKUMA 2011

From October 18 to 22, 2011 the plastics processing world will get together again at the Friedrichshafen Exhibition Centre for **FAKUMA 2011**. As in previous years, NORRES Schlauchtechnik will attend as an exhibitor to present its portfolio of industrial hoses specifically for the plastics industry in **Hall A6 / Stand A6-6406**.

FAKUMA is already the world's number one event in the field of injection moulding technology and also plays a leading role where extrusion and thermoforming are concerned. The optimal use of resources and energy efficiency will be focal topics at this year's event. The NORRES exhibit at **FAKUMA** will be consistent with this theme, reflecting the hose manufacturer's systematic strategy of sustainability. Many of the hoses produced by NORRES are made from renewable raw materials.
