NORRES Schlauchtechnik to train more new specialists in 2011

Seven trainees will strengthen the NORRES team in August

There will be several new additions to the NORRES team this August: to coincide with the start of the new 2011 training year, the hose manufacturer will welcome seven fledgling trainees to its headquarters in Gelsenkirchen. All the company's training places for 2011 have thus been filled on time.

Starting in August 2011, NORRES Schlauchtechnik will train three industrial business management assistants, two warehouse logistics specialists and two mechanics in plastics and rubber processing. These seven young people will begin their first day at work with a welcoming address from Managing Director Burkhard Mollen. They will then be treated to a tour of the entire plant, including the Sales department, the production shop and the warehouse, to give them a brief initial impression of their future employer.

NORRES takes its duty as a training institution very seriously; after all, well trained and appropriately qualified staff are crucial for its business success. The three-year training programme is interesting and varied, and the youngsters who complete it emerge optimally prepared for professional life. In the course of their traineeship, they support the remainder of the NORRES workforce and in return acquire all the abilities, practical know-how and skills they need to get ahead in their respective jobs. Numerous current staff have remained on the innovative SME's payroll ever since their own days as trainees – a success story the management hopes will continue. Employee training and continuing professional development are a top priority at NORRES.

"It gives us great pleasure to train qualified and motivated young people who then grow with the company", Mollen explains. NORRES Schlauchtechnik GmbH & Co. KG is a leading manufacturer of hoses and hose systems. A medium-sized firm based in Gelsenkirchen, it specializes in industrial hoses for use in many different branches of industry. Its portfolio also includes cable protection systems and special products as well as compatible connectors and accessories.

The company is conscious of its responsibility not only towards its employees – for instance, its duty to provide opportunities for training and continuing professional development – but also towards the world we live in. Everyone at NORRES is united in the pursuit of a strict sustainability strategy. At the NORRES Schlauchtechnik headquarters at the port of Gelsenkirchen, modern and highly impressive HVAC technology helps secure a cleaner future. Sustainability is an increasingly important issue at NORRES – for good reason: durable products which simultaneously protect the environment and reduce the costs of ownership testify to the company's commitment to the future. At the same time,

products made to last generate a continuous reduction in the amount of waste and benefit users with a long service life. Both the HVAC technology and the production equipment installed at the NORRES plant are geared to maximum sustainability and minimum energy consumption. Energy saving measures have been implemented at every level.
