

## Come and visit us at SPS/IPC/Drives 2009 in Nuremberg

In addition to an extensive portfolio of cable protection products, NORRES Schlauchtechnik will also present several exciting innovations at the SPS/IPC/DRIVES exhibition in Nuremberg from November 24 - 26, 2009.

As a leading manufacturer of conduits and conduit systems, NORRES has been successfully protecting cables and lines for a variety of applications since 1889. How NORRES benefits you:

- Plastic protection conduits
- Metal protection conduits
- Liquid-tight metal protection conduits
- Corrugated plastic tubes
- Compatible connectors
- Cable protection systems up to IP68 and fire protection up to V0
- Wide range of accessories

### **NORRES innovations:**

The NORRES exhibits will include the new **AUK 158 M/P** and **AUM 159 M/P** conduit connectors, which achieve protection up to IP67 according to EN / IEC 60529. These highly robust connectors thus guarantee optimal protection against the ingress of dust and moisture. Both the plastic AUK 158 M/P connector and the metal AUM 159 M/P connector are extremely resistant to tension and vibration. They can both be fitted very quickly and easily without special tools. The AUK 158 M/P and AUM 159 M/P can be supplied with a metric or PG thread in all standard dimensions. What's more, the connectors are offered with a metric thread for 19 mm or 52 mm outer conduit diameters as well as in PG 42 for the 52 mm size.

In addition to the new conduit connectors, NORRES will show its complete range of cable protection products at the Nuremberg exhibition.

You are cordially invited to visit our SPS/IPC/Drives 2009 **Stand 144 in Hall 6**, where we will be pleased to provide you with a personal demonstration of these and numerous other products in our cable protection portfolio.
